Abstract - The **Digital TG Diary** is an innovative and comprehensive mobile application designed to streamline and modernize the traditional Teacher-Guardian communication and academic record-keeping process for educational institutions. This application serves as a centralized platform where students, teachers, and parents can access critical academic and extracurricular information in real-time, ensuring transparency, efficiency, and effective communication.

The app incorporates multiple modules including Feedback & Problems, Guest Lectures, Educational Industrial Visits, Technical Events, Project Training, Extra-Curricular Activities, MSBTE Records, Monthly Attendance, and Teacher-Parent Communication. Each module is meticulously structured to maintain accurate records of all activities, achievements, and discussions. Additionally, the application provides intuitive screens for Home, Profile, Settings, Logout, and About, with a persistent navigation menu to enhance user experience and accessibility.

By leveraging this digital solution, the application reduces manual paperwork, minimizes communication delays, and empowers students to actively engage with their academic progress while providing teachers and parents with instant access to relevant information. This project represents a significant step towards the digitization of academic administration, fostering a more organized, accountable, and efficient educational ecosystem.

Key Words*: *Digital TG Diary, Academic Management System, Student Information System

1.INTRODUCTION

In the modern educational environment, efficient communication between teachers, students, and parents is crucial for academic success and overall student development. Traditional teacher-guardian diaries and manual record-keeping methods are often cumbersome, time-consuming, and prone to errors. To address these challenges, the **Digital TG Diary** has been developed as a comprehensive mobile application that digitizes and streamlines the academic management and communication process.

The **Digital TG Diary** is a comprehensive mobile application designed to address these challenges by digitizing the entire process of student information management and teacher-parent communication. This application serves as a single, unified platform where students can access their attendance records, marksheets, project and training updates, participation in technical and extra-curricular activities, and feedback provided by teachers. Teachers can use the platform to schedule and record guest lectures, organize industrial visits, maintain detailed progress reports, and provide timely feedback to students and parents. Parents can monitor their child's performance, attendance, and achievements in real-time, enabling them to guide and support their children more effectively.

The system includes multiple modules, each structured to maintain accurate and comprehensive records. These modules include Feedback & Problems, Guest Lectures, Educational Industrial Visits, Technical Events, Project Training, Extra-Curricular Activities, MSBTE Records, Monthly Attendance, and Teacher-Parent Communication. Each module is designed to ensure that relevant information is captured, stored, and easily retrievable whenever required. Additionally, the application features user-friendly screens such as Home, Profile, Settings, Logout, and About, along with a persistent menu bar for seamless navigation across different modules. Editable profile options allow students to update their personal information, while settings enable theme changes, password updates, and logout functionality, enhancing overall user experience.

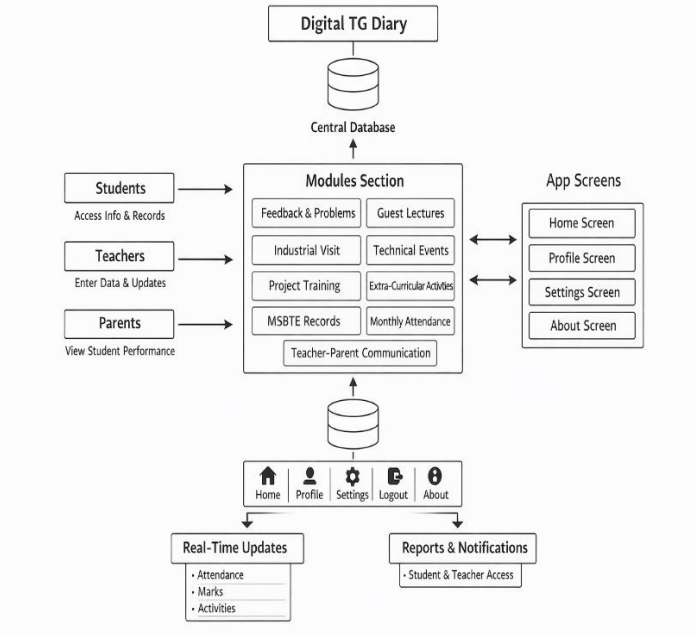

Fig 1: System Architecture

By implementing the **Digital TG Diary**, educational institutions can significantly reduce manual paperwork, minimize communication delays, and improve transparency and accountability. The app promotes active student engagement by providing instant access to academic and extracurricular information, while teachers can maintain well-organized records efficiently. Parents are empowered to stay informed about their child's progress, fostering better collaboration between home and school.

To address these challenges, the **Digital TG Diary** mobile application has been developed. This system acts as a centralized platform, allowing students to access their academic information, attendance records, project and training updates, and participation in technical and extra-curricular activities. Teachers can enter data, provide feedback, organize events, and monitor student progress efficiently. The application also ensures transparency and real-time updates, reducing administrative overhead and improving overall communication between students and teachers.

The app comprises multiple modules, including Feedback & Problems, Guest Lectures, Industrial Visits, Technical Events, Project Training, Extra-Curricular Activities, MSBTE Records, Monthly Attendance, and Teacher-Student Communication. Each module is designed to record and display relevant information accurately, making it easier for both teachers and students to stay informed. Additionally, the user interface features intuitive screens such as Home, Profile, Settings, Logout, and About, along with a persistent navigation menu for easy access to all modules.

By digitizing the TG diary, this application not only simplifies record management but also empowers students to track their performance actively and enables teachers to maintain organized, accurate, and accessible records. The **Digital TG Diary** represents a modern solution for academic administration, fostering efficiency, engagement, and a more structured educational ecosystem.

Overall, the **Digital TG Diary** is a practical and scalable solution that transforms traditional academic record-keeping into a modern, digital process. It not only simplifies administrative tasks but also strengthens communication, enhances data accuracy, and supports a more organized, efficient, and student-focused educational ecosystem.

By leveraging digital technology, the **Digital TG Diary** enhances efficiency, reduces administrative workload, and empowers both students and teachers with real-time access to essential academic information. It represents a step toward modernizing educational management, creating a more structured, organized, and student-focused learning environment.

II. LITERATURE SURVEY

Digital solutions for academic management have gained significant attention in recent years, as educational institutions seek to improve efficiency, accuracy, and transparency in student record-keeping. Mobile and web-based applications have become increasingly popular for managing attendance, academic performance, and teacher-student communication. Studies indicate that digital record systems reduce manual errors, streamline administrative workflows, and enhance accessibility for both teachers and students.

Research highlights that student performance is influenced not only by curriculum and teaching methods but also by timely feedback, access to academic records, and monitoring of participation in extracurricular activities. Traditional manual diaries and paper-based records are prone to delays and inaccuracies, making real-time monitoring difficult, particularly in large classrooms. Automated systems that digitally capture attendance, project progress, and event participation enable teachers to provide timely guidance and intervention, while students can independently track their academic status.

Several studies emphasize the importance of integrating multiple modules into a centralized digital platform. For instance, combining attendance tracking, project training records, technical and extracurricular event documentation, and teacher feedback in a single system ensures consistency and reduces redundancy. Research also suggests that providing students with access to their records improves self-regulation, motivation, and accountability, while teachers benefit from easier data analysis and reporting.

User-friendly interfaces and navigation are crucial for the adoption of digital academic tools. Persistent menus, intuitive dashboards, and editable profile options allow students and teachers to interact with the system efficiently. Literature indicates that systems with clear navigation, real-time updates, and data visualization enhance usability and engagement. Mobile applications, in particular, support on-the-go access, allowing students to review attendance, project status, and feedback at any time, thereby improving overall academic monitoring.

Furthermore, digital academic management systems have been linked to increased transparency and collaboration. When teachers can record feedback, update performance metrics, and communicate digitally, students gain better understanding of expectations and areas of improvement. Studies also highlight the role of automated notifications and reminders in improving student compliance with deadlines and attendance requirements.

Recent developments in educational technology suggest potential integration of advanced features such as machine learning for predictive performance analysis and automated alert systems for at-risk students. Such innovations can further enhance decision-making for

educators and promote a proactive approach to student support.

academic management systems, incorporating attendance, project, event, and feedback modules, improve efficiency, accuracy, and engagement in educational institutions. Mobile applications with intuitive interfaces and real-time updates empower both the literature demonstrates that centralized, digital teachers and students, facilitating effective communication, transparent record-keeping, and overall improvement in academic outcomes.

III. Proposed Methods for Academic Data Authenticity using Digital TG Diary

This paper presents a secure and comprehensive digital system designed to ensure the authenticity, integrity, and reliability of student academic records in educational institutions. The **Digital TG Diary** acts as a centralized platform where teachers can record attendance, project and training updates, technical and extracurricular activity participation, and feedback in real time. All data is securely stored in a centralized database, making it easily accessible to authorized users while preventing unauthorized modifications.

In the proposed model, every teacher and student is assigned unique login credentials. Teachers are granted **role-based access** to enter and modify academic data, while students have **view-only access** to their records. This prevents manipulation or duplication of data, as every update is linked to a specific user and timestamped, creating a full audit trail. Similar to blockchain-enabled anti-counterfeiting systems, this traceability ensures that all records are verifiable and tamper-proof.

The system allows students to verify their academic information, such as attendance percentages, project completion status, and teacher feedback, in real time. Notifications and alerts inform students about updates or changes, ensuring transparency and timely access to important information. Teachers can monitor overall student performance, generate reports, and quickly identify discrepancies or at-risk students, improving educational outcomes.

The Digital TG Diary also incorporates multiple modules, each designed to maintain data integrity and authenticity:

1. **Attendance Module** – Records attendance for each class session, automatically calculates monthly percentages, and flags irregularities.
2. **Project Training Module** – Maintains a complete record of student project submissions, training duration, discussion points, and feedback.
3. **Technical & Extra-Curricular Activity Modules** – Documents participation in events and activities, ensuring proper recognition and verifiable records.
4. **Teacher Feedback Module** – Stores structured and timestamped feedback, preventing unauthorized edits and maintaining accountability.
5. **MSBTE Record Module** – Digitally stores marksheets and documents from all semesters, ensuring secure archival and retrieval.

To further enhance security, all data changes are logged with **timestamps and user IDs**, creating a verifiable audit trail. Real-time updates reduce delays inherent in manual TG diary systems, and persistent menus and intuitive screens enhance usability for students and teachers alike.

At present, traditional paper-based TG diaries lack reliability, transparency, and real-time accessibility. Errors, misplacement, or deliberate manipulation of records are common challenges. In contrast, the Digital TG Diary provides a **tamper-resistant, traceable, and real-time system** that guarantees authenticity of academic records. By integrating secure authentication, access control, audit trails, and real-time notifications, the application ensures integrity, accountability, and trustworthiness in academic management.

The overall system architecture, along with the user interface and workflow between modules, is illustrated in the system diagram, which clearly demonstrates interactions between students, teachers, modules, and the central database. This structured approach ensures that academic records remain accurate, verifiable, and immune to tampering, creating a secure and transparent environment for both teaching and learning.

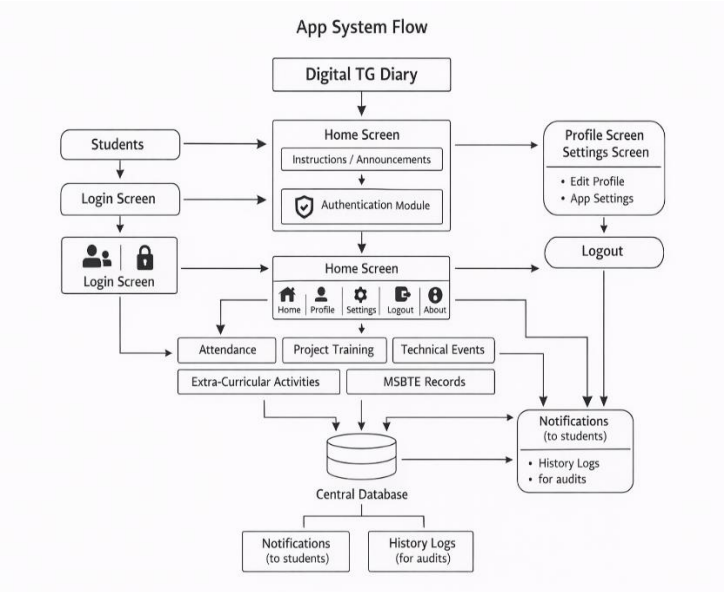

Fig 1: App System Flow

IV. OBJECTIVES OF THE PROJECT

The main objective of the Digital TG Diary is to develop a centralized, secure, and user-friendly mobile application that streamlines academic management, enhances communication between teachers and students, and ensures the authenticity and integrity of academic records. The specific objectives of the project are as follows:

1. To Digitize Academic Records: Replace traditional paper-based TG diaries with a digital platform for storing attendance, marks, project and training updates, and feedback.
2. To Ensure Data Authenticity and Security: Maintain tamper-proof records using secure login, role-based access control, and audit trails to track updates.
3. To Improve Teacher-Student Communication: Provide a platform for real-time feedback, notifications, and academic discussion, reducing delays and misunderstandings.
4. To Track Attendance and Academic Performance: Enable students to view attendance percentages, project submissions, and performance metrics easily, and allow teachers to monitor overall student progress.
5. To Record Technical and Extra-Curricular Activities: Maintain accurate records of participation in events, workshops, seminars, and extra-curricular activities for better student profiling.
6. To Facilitate Centralized Access to College Records: Store MSBTE marksheets, semester documents, and other academic resources in one place for easy access by students and teachers.
7. To Enhance Usability and Accessibility: Design an intuitive user interface with navigation menus, editable profiles, and settings, making it easy for students and teachers to interact with the system.
8. To Promote Transparency and Accountability: Provide real-time updates and notifications to students, ensuring transparency in academic management and accountability for teachers.
9. To Reduce Manual Workload: Minimize paperwork and manual record-keeping for teachers, enabling them to focus more on teaching and mentoring.
10. To Create a Scalable and Reliable System: Develop a robust and scalable app architecture that can handle multiple users, large datasets**, and future enhancements without compromising performance.**

V. APPLICATION DEPLOYMENT STAGES:

1. Prerequisites

- Install Android Studio (latest stable version).
- Install Java Development Kit (JDK) (version 8 or above recommended).
- Ensure you have a working Android device or emulator.

2. Open the Project

- Launch Android Studio.
- Go to File → Open and select your Digital TG Diary project folder.
- Let Android Studio index and build the project.

3. Configure Database

- using SQLite: ensure the database helper class is correctly set up.

4. Build the App

- In Android Studio, click Build → Make Project (or press Ctrl+F9) to compile the code.
- Resolve any errors or missing dependencies.

5. Run on Device

- Enable Developer Options → USB Debugging on your Android phone.
- Connect the phone via USB.
- Select your device in Android Studio and click Run.

6. App Execution

- Login Screen appears for students and teachers.
- Enter credentials (predefined or registered users).
- Navigate through Home → Modules → Profile/Settings → About → Logout using the menu bar.
- Teachers can update records, students can view their data.
- All updates stored locally using SQLite.

7. Testing

Test all modules:

- Attendance, Project Training, Technical & Extra-Curricular Activities, MSBTE Records, Teacher-Student Communication.
- Verify role-based access: students cannot edit records.
- Check notifications, feedback, and profile editing.

Ensure logout works and session ends securely.

8. Debugging

- Use Logcat in Android Studio to track errors or warnings.
- Ensure all database operations (insert, update, retrieve) work correctly.
- Check UI for responsiveness and proper navigation.

CONCLUSIONS

This paper presents a secure and comprehensive digital framework designed to ensure the authenticity, integrity, and transparency of student academic records. The proposed system operates as a fully functional academic management platform that allows students and teachers to access and verify academic data in real time, reducing errors and eliminating reliance on manual record-keeping.

The system enables users to log in and interact with multiple modules, including attendance tracking, project and training updates, technical and extra-curricular activity records, and teacher feedback. All records are securely stored in a centralized database with timestamps and user IDs, ensuring traceability and accountability. Based on this transparent and tamper-proof data, students can monitor their academic performance, and teachers can provide accurate feedback and updates.

As a result, the Digital TG Diary provides a reliable and efficient solution for managing academic records, enhances communication between students and teachers, and fosters trust and accountability within the educational environment.
