Abstract: In regular marketing, farmers used to sell their crops at market value which isn’t advantageous to farmers. The trend setting innovations driving the world higher than ever. Be that as it may, it is slacking with regards to Farming. Farm Direct Marketing is a stage which causes farmers to sell their products legitimately to the clients at the cost fixed by them. So the Framers get more benefits and hence makes agribusiness a beneficial zone.

Key Words: Farmers, Users, Products, Website, Seller, Buyer.

1. INTRODUCTION

Farmers are the most significant part of our general society. They work hard each day so we can eat nourishment. In any case, the request here is “Would they say they are really getting benefitted?”. The appropriate response is no.

In this way, our point is to build up a web application which goes about as an interface among farmers and end clients. The fundamental target of this interface which we create ought to be utilized to the both farmers and clients. It ought to be easy to use. There is no current framework actualized with this innovation. In this way, we are here to present another thing.

The advancement of this application will be a beneficial hotspot for a typical man. The point of making this model is to stopped the issues and challenges faced by the farmers by the people in the market. This interface is utilized to look at different crops transferred by various farmers.

Here deals to restaurants and retail locations are incorporated among Farm Direct Marketing approaches in light of the fact that the farmer has some power over the cost and the exchange depends on a relationship with an entrepreneur. Valuing shifts and might be higher for deals to restaurants, however lower for markets.

1.1 Modules

Farmer Registration and Login: Right now register into the application and utilize similar accreditations for login. When they login they get various highlights. For example, including crop, Updating crop, and so forth.

User Registration and Login: Right now register into the application and utilize similar certifications for login. When they login they get various highlights. For example, looking through harvest, choosing crop, Ordering crop, and so on.

1.2 Features

- The Farmers set the cost or are more control of the cost.
- Good items and administrations can get alluring costs and along these lines, little Farmers can be productive.
- To collaborate with clients that permit you to both advance the uniqueness of items and get criticism and recommendations.
- Good beginning stage for makers, as commitments are constrained.

2. ARCHITECTURE

The fundamental usefulness of this application is to interface consumers with the farmers. It gives a best interface to the farmers to sell their items. The web application contains various segments, for example, purchaser, vendors and item value, quantity details.

Vendors/Farmers: The dealers are farmers who produce an assortment of items. These things are sold online which additionally gives total data about the item.
Purchasers/Buyers: Buyers are the clients who need to buy items from farmers. Purchasers can contact this farmers utilizing the subtleties gave in the ranchers data. They can get to the farmer's details by tapping the purchase alternative.

This application gives the alternative to language choice like Telugu and English. It likewise give the rundown of things accessible alongside their value list. Since, there are different farmers the costs may shift for specific item. As the number of farmers who sell the item are likewise extraordinary. Their cost and amount requirements contrast from others.

3. WORKING

In this application, the IDE used is Eclipse in which the code is written by using HTML, JavaScript, CSS. The XAMPP controller is used as a cross platform for Apache and MySQL as it allows to run the application offline. Before execution, we need to start the Apache and MySQL to retrieve the data from database.

Client-server Architecture: The client-server model portrays how a server gives assets and administrations to at least one client. Instances of servers incorporate web servers, mail servers, and record servers. Every one of these servers gives assets to client gadgets, for example, work stations, PCs, tablets, and cell phones.

Eclipse: Eclipse is an Integrated Development Environment (IDE) utilized in PC programming. It contains a workspace and an extensible module framework for tweaking the earth. It is formed generally in Java and its basic use is for making Java applications, yet it may moreover be used to make applications in other programming tongues through modules, including C, C++, C#, COBOL, D, Perl, PHP, Prolog, Python, R, Ruby, and Scheme. Advancement situations incorporate the Eclipse Java improvement devices (JDT) for Java among others.
XAMPP Controller: XAMPP is an acronym for cross-stage, Apache, MySQL, PHP and Perl, and it permits you to assemble WordPress website disconnected, on a neighborhood web server on your PC. This basic and lightweight arrangement takes a shot at Windows, Linux, and Mac – thus the "cross-stage" part.

Apache Tomcat Server: Apache Tomcat is used to send your Java Servlets and JSPs. So in your Java project you can develop your WAR (short for Web ARchive) record, and simply drop it in the send index in Tomcat. So Apache is a HTTP Server, serving HTTP. Tomcat is a Servlet and JSP Server serving Java innovations.

MySQL: MySQL is an open source relational database the executive's framework. It runs as a server and permits different clients to oversee and make various databases. It is a main segment in the LAMP heap of open source web application programming that is utilized to make sites. Light represents Linux, Apache, MySQL, and PHP.

4. CONCLUSION

In any marketing or business there is an intention of benefit included and simultaneously the advertising is to be founded on specific qualities and standards, for example, offering reasonable costs to the farmers who make a solid effort to give the nourishment. Through this Farm Direct Marketing stage, we will ensure that both the farmers and purchasers will be gainful. This stage will urge the farmers to keep cultivating and ensure they get the correct benefit for their work.
