

III rd world War by Invisible Enemy, Who is Responsible, & How To Come Back

Ayush Agarwal

(UGC Net)Guest Faculty CCS University, Meerut

Abstract :-The question now arises as to why the facts of the corona virus were hidden by China. The policies of the Chinese government have always been ambitious globally. He has been strengthening his economy through various means. Is. Over the years, it has got its environment, business, education and manufacturing industries promoted. The corona virus spread to China before the New Year holiday, while many millions of tourists and traders in the world had either come or were coming for the purpose of traveling and doing business in China, and if the corona virus was introduced by the Chinese government Had it been announced earlier in relation to it, it would have caused a lot of financial loss.

coronavirus and when he made public the information about the outbreak of infection on 21 January, all the tourists went to their country, which spread the corona virus infection all over the world.

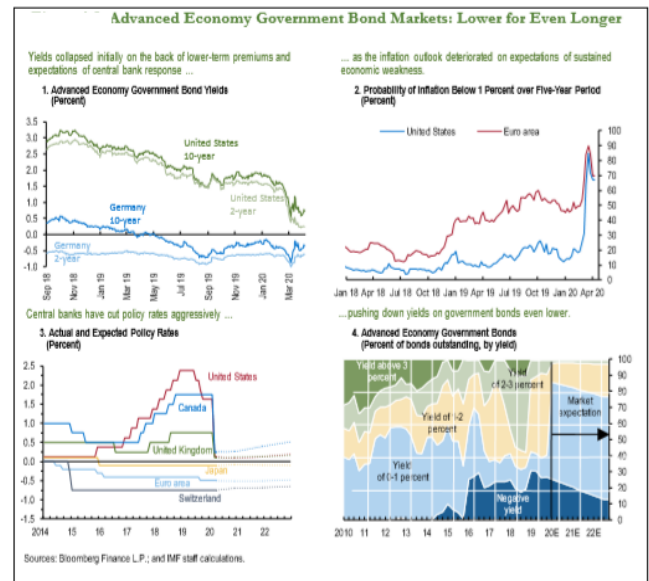

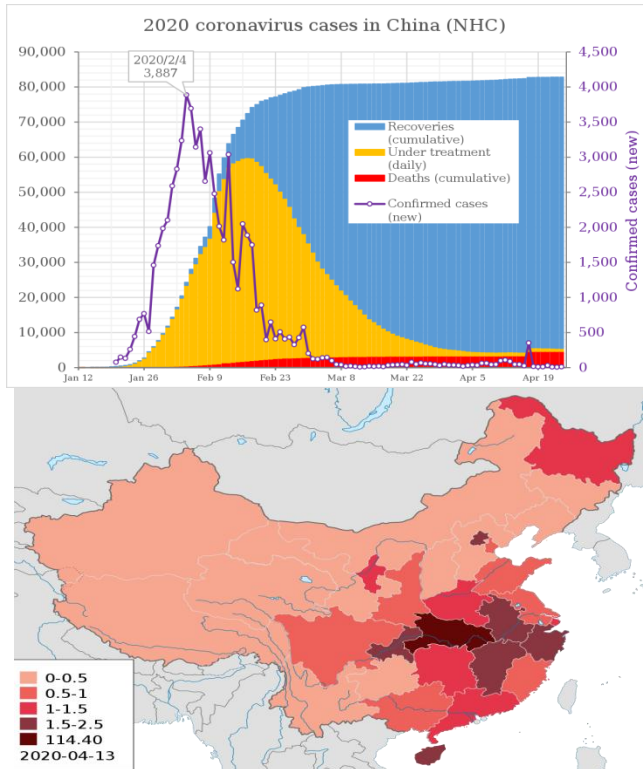

Therefore, he kept the information related to the corona virus hidden. Apart from this, China Navastra, which started 15 days before the New Year (Chinese New Year), which starts from New Year and starts till 25 January, was also running, because China was economically behind the USA due to the spread of the Corona virus. But inadvertently, a bio-weapon was found in his hand and travelers from all over the world, tourists were coming to his country China. He concealed the fact that the tourists had become infected with the

This was a thoughtful move by China, which caused the entire world economy to falter. Meanwhile, due to the deterioration of the economy, the world's stock markets fell completely and it also bought shares of its influential companies, due to which the economy of China at the present time became stronger than the economy of other countries of the world. We can say this situation in such a way that it has been done by China (up to the National Standard 3). Because in any war, two things are lost: mass and goods. China has used the Third World War in a diplomatic manner, using the corona virus as a bio-weapon, through counterfeiting strategies Corona virus.

Introduction:-This research paper has been written on the basis of the interview of a doctor, researcher published in

various published research papers and news journals, especially in China. The outbreak of Corona virus has spread all over the world. Various research and experiments have proved that Kovid-19 is not spread only by bats or by Penguin virus.

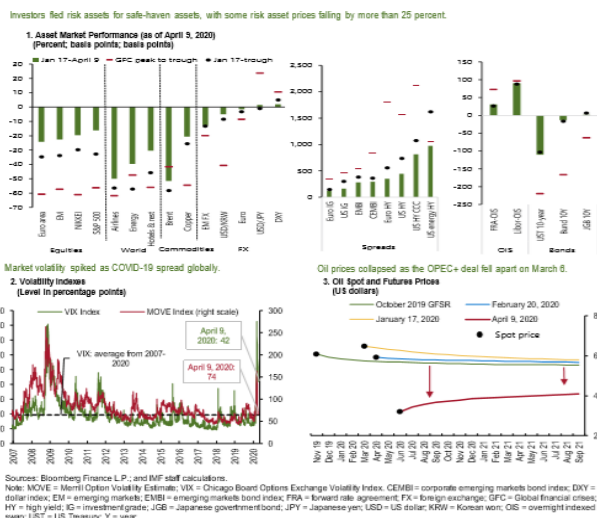

This virus is spreading infection at all temperatures of nature under special circumstances and it is also proven that either this virus is produced by fusion of two viruses or it is prepared in laboratory. In China, the outbreak of the Corona virus has been spreading in some form (bird flu, swine flu) for many years. The corona virus is not natural. If it were natural, it would not have caused havoc in the whole world, because every country in the world has different temperature.

Therefore, a research lab on the Corona virus in China was established in Wuhan City, on which million dollars were also funded by the US.

The Chinese dictators hiding of their infection by the Chinese dictator government brings her into doubt. In addition, the spread of Corona virus infection at a time when about 16 million foreign tourists and students were present in Wuhan City on Wuhan spring festival and New Year holidays. Also the Spring Festival was to begin on 25 January. According to the report published in 2017, there was a possibility that if the infection of the Corona virus spread from one human to another, it could cause terrible destruction. Whether or not corona virus is bio-worldwide, their own arguments are being given, which is still a question and is a subject of research. But the following arguments cannot be denied:

Financial Market Developments: Adding Oil to the Fire

1. The corona virus research lab is located in Wuhan City, China, which works under the protection of the China Army. That the Chinese dictator government terraced the doctors and staff of the Wuhan City Hospital to keep their mouths shut.
2. That the hospital records have been tampered with or deleted by the Chinese government and the facts have been hidden and media and news have been curbed.

3. That Burger was installed in Wuhan to alert the citizens by spending a lot of money in the event of China spreading the Corona virus infection which was not played in time.

4. That the infection of the corona virus did not spread to other places in China except in Wuhan City, while most of the countries of the world got infected with the Corona virus, selecting the appropriate time (New Year).

5. That the world community be given misinformation. That the medical kits used in corona virus infection etc. should be decided in large quantities in advance.

6. That the infection be controlled quickly, benefiting politically and financially.

7. Investing in the stock market due to the collapse of the share market, completely damaged the world economy. In any war, there are two losses, one is life and the other is the economy. Economically strong China and the least damaged of life is the use of corona virus by China as bio-weapon.

The corona virus which has caused the entire world to shrivel today has spread to almost all the countries of the world in the form of an epidemic. Currently about 18 lakh people are suffering from this pandemic and about 1 lakh people have died. According to the World Health Organization's 20 January 2020 report, the corona virus was reported to the World Health Organization Office of China on 31 December 2019 in Wuhan city of Hubei province China, with a total of 44 cases of schizophrenia. And there was no information about the reasons for its spread. On 11 and 12 January, the World Health Organization received from the National Health Commission China, on which they reported the outbreak of the virus from the Sea Food Market in Wuhan city and informed about a new type of corona virus. Along with this, on 13 January Thailand, on 15 January, Japan and on 20 January, Korea filed an imported case of Corona virus from China. According to the World Health Organization report, as of 20 January 2020, there were 282 cases of corona virus, of which 278 were in China, 2 in Thailand, of which 258 in Hubei province of China, 14 in Guasdong province, 5 in Beijing municipalities and Singhai municipality. This fact report was released by the World Health Organization after the 21 January 2020. After that the corona virus has amazingly shook its havoc all over the world.

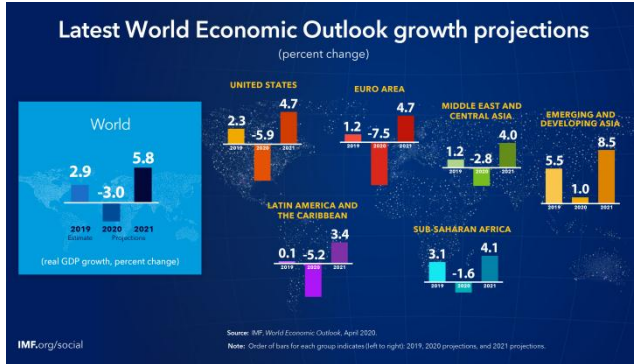

China's policies have always been influencing the whole world with the aim of setting its ambitions. Its policy of

region expansion and the policy of economic expansion affect all countries in one way or the other. Due to its expansionary policy, there is some form of dispute with its neighboring countries like India, Bhutan, Vietnam, Nepal, Myanmar, Japan, South Korea, North Korea etc. or they have occupied their territories under certain agreements. And wants to establish its dominance in the South Indian Ocean and establish itself as a superpower in the whole world, due to which its Award the controversy bordering countries and that is why his U O's intervention in the region of O. The US, working against China's policy, provides assistance to anti-China countries and stands firm against China's expansionist policy. For this reason, there has been a possibility of war in this area many times. The second policy of China is to establish itself economically the best in the world. China has a large population and its labor cost is much lower than other countries in the manufacture of anything. According to the International Monetary Fund, China's economy in 2020 produced 13.4 Trillion, making China the Iled largest economy in the world.

Nominal GDP Rankings by Country
1. United States (GDP: 20.49 trillion)
2. China (GDP: 13.4 trillion)
3. Japan: (GDP: 4.97 trillion)
4. Germany: (GDP: 4.00 trillion)
5. United Kingdom: (GDP: 2.83 trillion)
6. France: (GDP: 2.78 trillion)
7. India: (GDP: 2.72 trillion)
8. Italy: (GDP: 2.07 trillion)
9. Brazil: (GDP: 1.87 trillion)
10. Canada: (GDP: 1.71 trillion)

China has about 1.4 billion people, which becomes the most populous country in the world. Even after this, the people of China are relatively poor in terms of standard of living and produce only 10 thousand 870 dollars per person. While the US per capita GDP is 67430, due to which Chinese citizens have a low standard of living. It is because of low living standards that Chinese companies pay their workers lower wages than workers in other countries, due to which the cost per labor is reduced and the total cost on sugar product is lower than that of other countries. This is the reason why foreign companies set up their industries in China. For this reason, China was established as a major manufacture in the world and most of the countries of the world started exporting their manufactured goods abroad, which is a

component of Chinese economy. China has established its economic growth by exporting machinery and equipment at low cost. China spends 9 percent of its total GDP on infrastructure.

China launched its Belt and Road Initiative in 2013, which is one of the largest projects in the world. China Silk Road Project, connecting its 68 countries with Europe, working on its road project internationally, established railroads and roadways between countries of all Europe and Asia so that it could reduce its cost in all countries. The goods manufactured here could be exported abroad at low rates and in return they could import raw materials and oil from abroad at low rates. Along with this, he built his new port, Pipe Line

In line with its economic policy, it has connected all the countries of the world by waterways, railways and roadways, thereby turning the world's economy towards itself, making China's economic-dominated Eurasia and American-dominated transatlantic trading area. Started becoming competitors. In this way, the Chinese government works on the following objectives to complete its projects: -

1. To set up more and more industry trades with the aim of increasing the foreign exchange reserves in China.

2. To get foreign manufacturers to establish industry businesses and export products manufactured at low cost.

3. For new infrastructure for export of cement, steel metal, for setting up railroads, etc. for China's infrastructure to set up.

4. Keeping the countries on the western border of China stable and establishing their dominance in the South China Sea, China is the world's largest importer of raw materials, second only to the USA after the US. China imports raw materials from the US. This includes oil, fuel, metal ores, plastics and organic chemicals. China is the largest importer of aluminum and copper and consumes 13 percent of the total world commodity. In which nickel 56 percent, copper 50 percent, steel 50 percent, aluminum 47 percent, cotton 33 percent, rice 31 percent, gold 27 percent, corn 33 percent, wheat 17 percent, oil 14 percent, making it clear that China is importing raw materials to strengthen its economic situation by exporting finished products. China is the second largest holder of the US Treasury. Since the middle of January 2020 it has owned 1908 trillion which is more than 15 percent of the public debt. China buys US debt to support the value of the dollar, as China puts its currency in the US dollar and devaluates the currency whenever it needs to keep up the competition and the US largest banker China takes advantage of this as it happens and whenever the United States pressures China, China threatens to sell its holdings, causing both Disputes continue to arise in the form of economies.

Corona virus 19 It is true that the virus was spread from Hubei province of China, but the first date for the spread of this virus is shown by China's ruling party, December 16 and on 23 January, China National Health Organization announced that the disease One is infecting human beings with other profits. It was too late for the Chinese government to make the announcement, while the Mahamari outbreak stork alarm sounded on 16 December by the late whistleblower Li Wenliang, a doctor at the Wuhan City Hospital in China

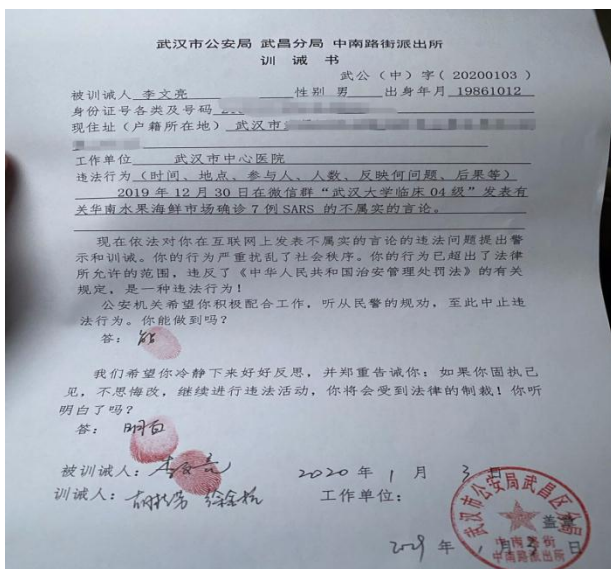

Li Wenliang

Dr. AE Fen

China was later reprimanded by a Chinese officer for sounding the alarm and spreading rumors, because he made his patients' reports public. Dr. Lee later died of the corona virus on 6 February 2020. In addition, based on the interviews given by Dr. AE Fen to various newspapers, it is found that Chinese authorities did not issue any warning before the outbreak of the virus and which led to the death of about 203,545 people & 2917073 confirmed case in the world and hiding the reality. It is known from the China News Agency and various published research papers that the outbreak of the disease (corona virus) in China had spread since the beginning of October, which was recorded in the case of malignant pneumonia. AK Fen told the magazine that he had immediately informed the hospital authorities and had also confirmed that the virus like Saras had been infected. Subsequently, the Health Commission of Wuhan issued a directive not to tell the medical staff about the virus or anyone's disease. Public disclosure related to the disease is prohibited and AE was charged for spreading rumors and AE was not asked to tell any employee about the disease. It was also ordered not to tell her husband either. In addition, AK told the magazine that Hu Ji Wei, a nurse at the hospital, was infected and he was also reported to have a version of the disease in the hospital as virus pneumonia. Apart from this, more doctors of the hospital got infected. AE regrets that if I had not kept quiet under the pressure of the authorities and had given information about this disease to all the doctors, many people would have survived. the corona virus first spread in China in October.

According to the report of the World Health Organization, the corona virus has spread from China's Sea Food Market to Wuhan City, but this is not true. The Corona virus patient was suffering from Alzheimer's disease, which had never been to the Wuhan Sea Food Market. Whereas other research has proved that the first death due to corona virus occurred on November 17 and as the effect of corona virus infection shows between 2 to 14 days and death occurs in 20 to 25 days, it is proved that But China has put the world community in danger by hiding the real facts, the subject of which needs to be investigated more intensively. A doctor in Wuhan posted information on social media about the new corona virus shared by the late whistleblower Li Wenliang. She broke the silence, saying that she was terrified of the authorities because they had issued an alarm without their permission when the outbreak occurred. Wu Fen City Central Hospital's emergency department director AE Fen told the Chinese Daily that he had published an image of the diagnosis report on social network We Chat on December 30, showing that the patient had pneumonia-like corona virus infection. Interviews with Ai Weiwei revealed that the local health department of the epidemic center in Wuhan missed the warning about the outbreak before the virus spread, infecting more than 117,000 people worldwide and killing more than 4,200 people. The magazine is published by the state-run People's Publishing House. According to data from the World Health Organization, the SARS outbreak 17 years ago infected more than 8,000 people worldwide and caused more than 800 deaths. Ai Weiwei told the magazine that she immediately reported to the hospital's Community Health Service Center and the Department of Infectious Disease Control that one of her patients had detected a virus like her head, "she said. A directive was issued not to disclose anything. Shortly thereafter, the hospital sent all employees on public disclosure related to the disease. Two days later, the person in charge of the hospital supervision department told Ai Weiwei to "spread the rumor" to all employees of his department not to disclose any information about the disease and to no one, Not even told her husband "Ai Weiwei said that Weiwei Wei, a hospital nurse, was infected about a week later. However, although the hospital initially stated in the diagnosis report that she had "viral pneumonia", the description of the disease was later changed to "infection". Wuhan City Central Hospital will become one of the city's most hit medical institutions, with four doctors, including Kovid-19 from Lee Sqwiding. According to reports, the other two doctors in the hospital are in critical condition. "If doctors of these diseases

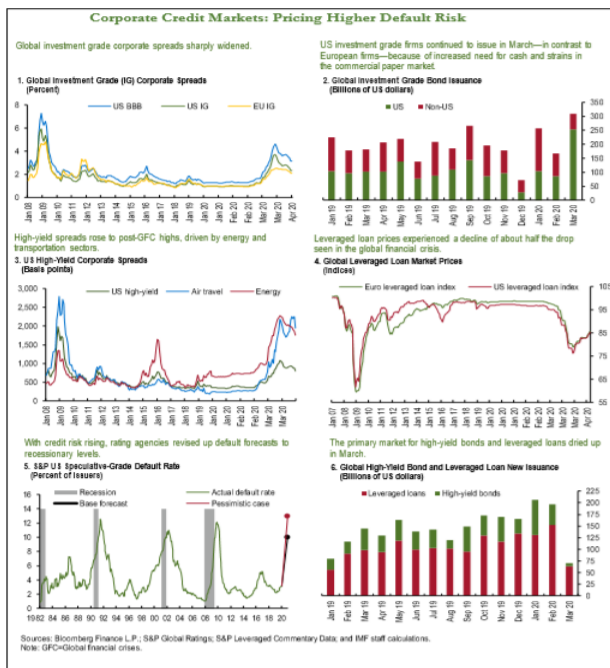

can be warned first, they will not die. Therefore, I am sorry (I did not warn any more people)," she said. He said: "If I can find out [that the outbreak results], even if I am warned, I will tell everyone." "I have thought many times, if only time could be reversible."

China was accused of increasing the number of deaths from its corona viruses by 50%. Officials put the number of deaths from corona virus in central China at 3,869, up from the previous figure of 1,290. The cumulative number of confirmed infections in the city has also increased to 50333, an increase of 325. The move appears to be a response to growing skepticism about the accuracy of China's official data and holds China responsible for the global health crisis that claimed the lives of more than 142,000 people and caused the global economic downturn. The difference in the number of deaths adds uncertainty. 28,000 missing persons killed: Local authorities say the new total was obtained after a detailed investigation, and are now involved in home deaths due to uncontrolled virus at the start of the outbreak and wrongly recorded by the hospital. Caused deaths. Researchers at the University of Hong Kong recently estimated that by the end of February, China had about 232,000 confirmed cases, more than four times the number of cases at the time. As of last Friday, China confirmed more than 82,000 officially confirmed cases and more than 4,500 deaths, including Wuhan City's revised records.

Liu Xi said the Lancet paper data also questioned the accuracy of preliminary information provided by China. At the beginning of the outbreak, the main official public information source is a notice of the Wuhan Municipal Health Commission. The notification, issued on 11 January, identified 41 patients who began to be identified as the only confirmed cases, and the count remained until 18 January. The notice does not state that the seafood market was the source, but he repeatedly indicated that there was no evidence of spread from one person to another, and most of the cases were market-related. Because the Wuhan Municipal Health Commission reported that as of January 10, a clinical trial had confirmed these 41 cases, and authorities likely knew the medical history of each patient, so "China may have felt that the epidemic originated in Wuhan South China" There was no "seafood market," Lucy told Science Insider. (Lucy revealed yesterday by the American Society of Infectious Diseases Project Science Speaks Publishing also mentioned his concerns in an online interview.)

Christian Anderson, an evolutionary biologist at the Scripps Research Institute, analyzed the 2019-nCoV sequence to clarify its origins. He said the first confirmed case of the Lancet 1 December is "an interesting tidbit". He said: "A situation where a person is infected outside the market and then puts it on the market is one of three conditions that we believe are still consistent with the data." "Looking at our current data and knowledge, it is completely justified." In the other two cases, the original is a group of infected animals or single animals that have entered the market. Anderson published his analyzes of 27 available genomes of 2019-nCoV on the Virology Research website on 25 January. This indicates that as of early October 1, 2019, he had the "most recent common ancestor" (meaning common source). Cao Bin, the corresponding author of Lancet and a pulmonologist, wrote in an email to Capital Insider, Capital Medical University, that he and his co-authors "appreciated Lucy's criticism." He wrote: "It seems that the seafood market is not the only source of the virus." "But to be honest, we still don't know where the virus came from."

Lucy noted that corona virus that caused Middle East respiratory syndrome (sometimes fatal disease, sometimes fatal disease) was discovered by a patient in Saudi Arabia in June 2012, although later research could find out Jordan Hospital suffered an unexplained pneumonia outbreak in April 2012. Samples of two people killed in Jordan confirmed that they were infected with the virus. They suggested that retrospective analysis of blood samples of humans and

animals (including suppliers from other animal markets) in China may clearly show the origin of 2019-nCoV. He said: "There may be a clear signal in the noise". According to government data seen by the new Corona virus South China Morning Post, the first patient in China, it can be traced back to 17 November. So far, Chinese authorities have identified at least 266 people infected in the last year, all of whom at some point have not received medical attention were in custody. After testing samples collected from suspected patients by health authorities, some cases were likely to be chronic. The reporter interviewing the medical community suggested that Chinese doctors only realized that they were treating a new disease in late December. Since the outbreak in Wuhan, a city in central China in January, scientists have been trying to map the initial transmission pattern of Kovid-19, two months before the outbreak became a global health crisis. According to government data seen by the Post, a 55-year-old man from Hubei province may be the first person to sign Kovid-19 on 17 November. In the first 9 cases reported in November, 4 were males and 5 females, and none of them were confirmed as "zero patients". They are all between the ages of 39 and 79, but it is unknown how many residents are in Wuhan and the outbreak site of Hubei Province. The World Health Organization website is the first confirmed case of Kovid-19 in China, which occurred on 8 December, but the global agency itself did not detect the disease, but relied on countries to provide such information.

On December 27, the Wuhan Spring Festival Working Conference revealed that during the 2020 Spring Festival, Wuhan Railways, highways and airlines are expected to receive 15 million passengers, an increase of 0.5% over the previous year. In 2020, the Spring Festival begins on January 10 and ends on February 18, lasting 40 days. It is predicted that the Wuhan Railway is expected to transport 10.74 million passengers during the Spring Festival, an increase of 6% year-on-year. 1.76 million airlines, 8% year-over-year; 2.5 million highways, 20% year-over-year. According to the concerned person in charge of the city's Spring Festival transport office, after extensive forecasts and decisions, the 2020 Spring Festival is ahead of previous years. The city has 1.2 million college students with more concentrated vacation time, and all of them during the Spring Festival. Student flow, labor flow, family travel flow and tourism flow are superimposed with the following characteristics: time concentration and flow direction aggregation, resulting in increased traffic pressure.

Even before this, there was an outbreak of SARS virus in China in about 2002 and because the sea food market in China is the public wild animal market. Liu Lin (Melinda Liu), Smithsonian Magazine November 2017 H7N9 first spread from birds to humans in 2013. Since then, five waves of this virus have appeared. The fifth wave began in October 2016. As of September 2017, it had infected 764 people, far more than the previous four waves. Health officials recently confirmed that there were a total of 1589 cases of H7N9, with 616 deaths. Tim Uyeki, chief medical officer of the US Centers for Disease Control and Prevention's influenza department, said: "At any given time, your virus mortality rate reaches 40%, which is very serious. "To date, the only validation method for patients to acquire the virus is direct exposure to infected animals. However, if H7N9 were to change further and develop the ability to pass easily from person to person, it could spread quickly and kill millions worldwide. The prospect of a disaster usually worries cautious medical researchers, even hinting that H7N9 may clash with the severe flu virus that caused the 1918 pandemic, causing 50 to 100 million deaths. Guan Yi, a virus specialist at the School of Public Health at the University of Hong Kong, famous flu predator predicted that H7N9 "may be the greatest threat to public health in a hundred years." Experts at the Centers for Disease Control and Prevention warned in June this year. Of all the new influenza strains evaluated, H7N9 is "likely to appear as an epidemic virus and cause severe human disease."

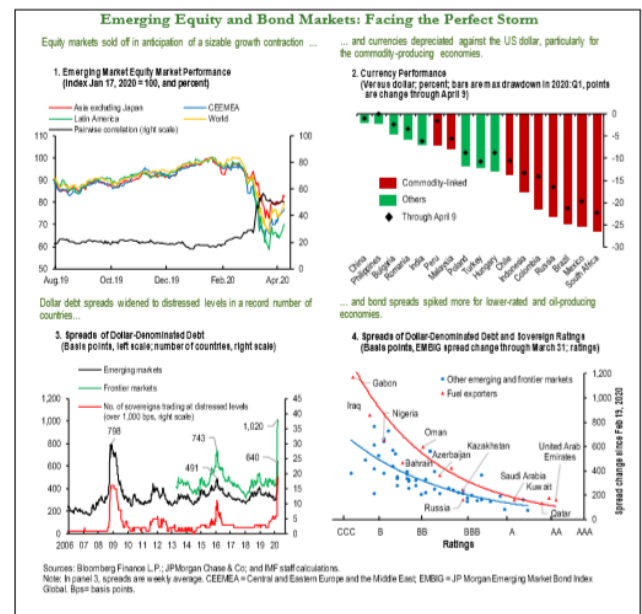

Wuhan Institute of Virology biological weapons/ new coronaviruses research laboratory

At an emergency meeting in Beijing, Chinese President Xi Jinping spoke of the need for covirus material and established a system that would be able to prevent similar

According to an article published in Ponce, according to a Cambridge University study, the corona virus has been originally analyzed on 13 September and is being analyzed for the patient. Apart from this, it is also being studied whether it is not bio-digestive and these possibilities also cannot be ruled out. Apart from this, the World Health Organization has also been indifferent in its responsibilities and they forwarded their report to the data given by the China government, which caused the world community to get confused and the corona virus caused havoc is epidemics in the future. Xi Jinping said a national system should be put in place to control biosafety risks, "protecting people's health" because laboratory safety is a matter of "national security". Xi Jinping has not actually confirmed that coronavirus, which is currently destroying large areas of China, has survived an organic research laboratory in the country. But the next day, there was evidence that this had happened because the Chinese Ministry of Science and Technology issued a new directive entitled "Instructions to increase biosecurity management in microbiology laboratories. These labs have to respond to new coronaviruses, etc." Will happen." Advanced Virus. "China seems to have a hard time placing dangerous pathogens in the test tube, which it belongs to?" How many "microbiology laboratories" in China can handle "advanced viruses like new corona viruses"? The facts prove that China has only one. And the place is located in the Chinese city of Wuhan and Wuhan is also seen the epicenter of the epidemic. this is right. The Wuhan Virus Research Institute in China has only 4 microbiology laboratories in China that can handle the deadly coronavirus. The laboratory is part of the Wuhan Virus Research Institute. Medical staff examined the patient's temperature, which showed moderate covalent symptoms. General Chen Wei, the PLA's best-known biological warfare specialist, was sent to Wuhan in late January to help with the contents of the epidemic. According to PLA Daily, after CLA in 2003, Chen studied SARS rash in coronaviruses, as well as in Abola and Anthrax. This is not the first time he has visited the Wuhan Institute of Virology as it is one of the only biological weapons research laboratories in China. Can the virus escape the lab and keep the calves in the bottle as before, is the chain's job? It works for me. Plus the history of similar incidents in China. Even the lethal SARS virus survived (and may be) from the Beijing lab, which has been used twice for experiments. Both "man-

made" epidemics have changed rapidly, but if proper security measures are taken, they will not happen at all. Then there is the fact that some Chinese researchers sell to street vendors after conducting experiments.

The US government is investigating whether to produce the Kovid-19 virus from China's Wuhan government laboratory. The Chinese Communist Party denies this possibility. On the weekend, Yuan Jiming said: "This virus cannot come out of us." Mr. Yuan is a senior researcher at the Wuhan Virus Research Institute, which studies the most serious pathogens in the world. He is also the secretary of the Laboratory Communist Party Committee. He was accused of "deliberately trying to try people" because he indicated that his lab could be the source of the epidemic The question now arises as to why the facts of the corona virus were hidden by China. The policies of the Chinese government have always been ambitious globally. He has been strengthening his economy through various means. Over the years, it has got its environment, business, education and manufacturing industries promoted.

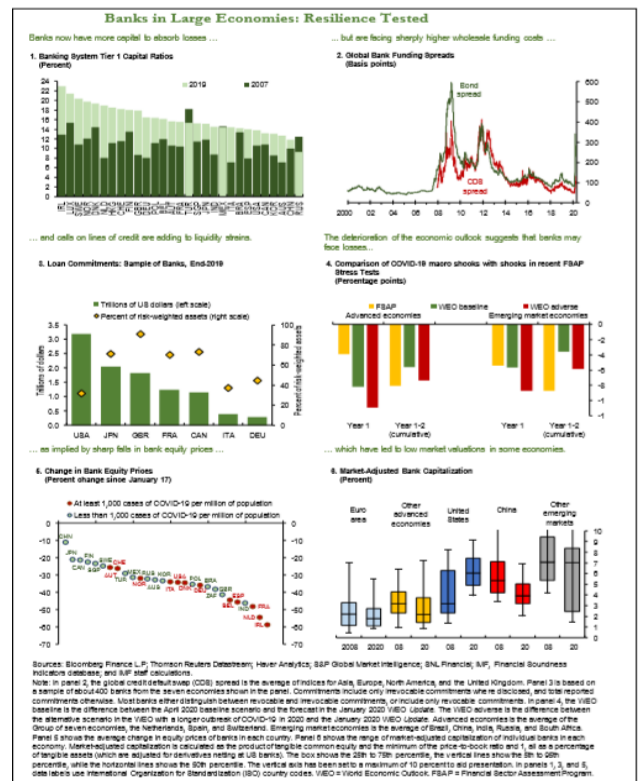

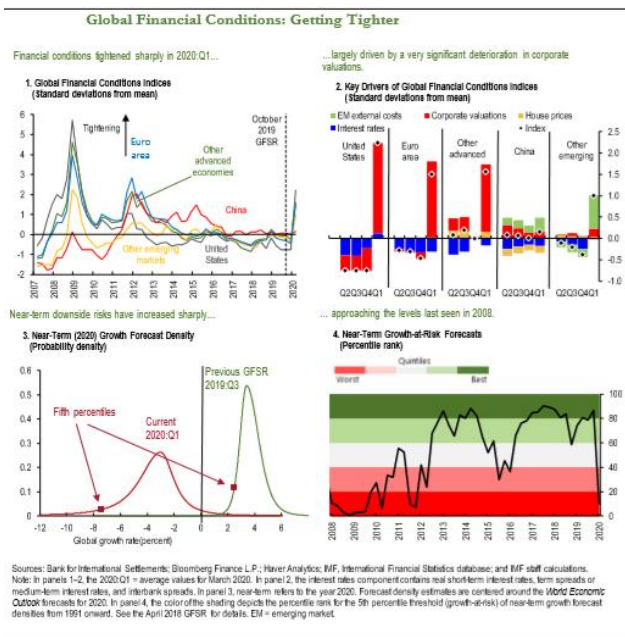

The corona virus spread to China before the New Year holiday, while many millions of tourists and traders in the world had either come or were coming for the purpose of traveling and doing business in China, and if the corona virus was introduced by the Chinese government Had it been announced earlier in relation to it, it would have caused a lot of financial loss. Therefore, he kept the information related

to the corona virus hidden. Apart from this, China Navistar, which started 15 days before the New Year (Chinese New Year), which starts from New Year and starts till 25 January, was also running. China was economically behind the USA. But due to the spread of the Corona virus, inadvertently, a bio-weapon was found in his hand and travelers from all over the world, tourists were coming to his country China. He concealed the fact that the tourists had become infected with the corona virus and when he made public the information about the outbreak of infection on 21 January, all the tourists went to their country, which spread the corona virus infection all over the world.

Conclusion:- This was a thoughtful move by China, which caused the entire world economy to falter. Meanwhile, due to the deterioration of the economy, the world's stock markets fell completely and it also bought shares of its influential companies, due to which the economy of China at the present time became stronger than the economy of other countries of the world. We can say this situation in such a way that it has been done by China (up to the National Standard 3). Because in any war, two things are lost: mass and goods. China has used the Third World War in a diplomatic manner, using the corona virus as a bio-weapon, through counterfeiting strategies. It is therefore necessary that the world community should become aware of China in the future and should

world community should also avoid using any Chinese item in the future, because outbreaks of such virus and even stronger viruses will continue to develop and spread in China due to their food and drink. Currently, many multinational companies are established in the manufacturing sector in China because of the high population of China and the world class of infrastructure roads, railways, waterways have been prepared by the Chinese government and the labor rate is low, due to which From there it is made to any product at a low cost, so that they can challenge the world competition. But the world community should not boycott Chinese goods to protect human beings by not getting caught in such greed. Anyway, the Chinese government pays more attention to quantity than quality, which makes the quality of Chinese goods unreliable. In the present environment, if the human resource is seen as an alternative to China in the world, then the name of India appears where there is currently a stable and strong decision-making government, which has a strong and liberal foreign policy and foreign companies. By giving special package to work in India, we are inviting them to set up industries here.

Immediately break their trade and political relations with China while showing solidarity to the world community. The

Skilled and unskilled levels are available in India and labor costs are much lower than in other countries. Presently, due to the outbreak of the Corona virus epidemic, it has been

proved that the immunity power of Indians is very good compared to the citizens of other countries. Because of the corona virus the population in India is very less. The behavior of Indians is very soft, sweet-spoken and hardworking compared to other countries in the world, due to which in the whole world, Indians are acting as skilled and unschooled labor in almost all the countries of the world and their work is praised. . There is a democratic government here and everyone enjoys complete independence, due to which companies operate independently and the government does not interfere in their internal affairs. There is no curb on media here. She works in a free and fair manner. In the current environment, India has a special place in the world community because the way the Government of India has helped the countries of the world in the form of medicines to fight the Corona wire, while it is also fighting the corona virus, which the whole world has given India The government has praised this work. Therefore, in the present circumstances, India is a favorable and best place to start industry.
